

Automatic Happy Hour	Change Specific items to sell at the Happy Hour Price. You can set multiple Happy Hour schedules to provide flexibility in choosing which terminals use Happy Hour and which ones do not.
Bar Tabs	A customer simply swaps their credit card for a Bar Tab card, and presents this each time they come to the bar. When they are ready to pay, the Bar Tab is paid off using their credit card, cash or transferred to a table or Customer Account.
Beverage Monitoring	Beverage monitoring compares the bulk beverages usage to POS sales transactions, giving your venue accurate and reliable data to control wastage and spillage.
Customer Loyalty	Built-in Customer Loyalty is extremely versatile, allowing you to choose which POS terminals offer loyalty. Points can also be offered on specific items that might be part of a promotion.
DVR Security Interface	Send sales data 'Live' to Digital Video Recording equipment to match image data with POS transactions.
Electronic Invoicing	Invoices from ALM, HLW and ILG can be electronically imported, reducing many hours of tedious data entry. Ideal POS System also supports electronic purchase orders for HLW and ILG formats.
Email Facility	Customer Tax Invoices and Statements can be sent directly to your customers using Ideal POS System's built-in Email Server. Purchase Orders can also be emailed directly to your Suppliers.
Ideal Handheld	Using our Ideal Handheld ordering software, you can take an order from your customers while they are sitting at the poker machine by swiping their membership card to earn points.
Integrated EFTPOS	EFTPOS terminals can be interfaced directly to Ideal POS System to eliminate operator mistakes and improve speed of service.
Kitchen Monitor	Replace traditional Kitchen Printers with easy to read Kitchen Monitors. Summarise orders to quickly calculate similar items.
Liquorfile Price Book	Liquorfile is designed to reduce the tiresome task of establishing and maintaining your stock file when implementing and managing your POS System. The Liquorfile product book operates as an electronic catalogue updating your active inventory system.
MYOB Accounting Interface	Send reconciled banking totals and supplier purchase data seamlessly to MYOB Accounting Software via a direct ODBC Database Connection. General Ledger accounts in MYOB are linked to Sale & Purchase Categories in Ideal POS System.
PDE Stock-Take	From the PDE, you can perform multi-location stock-takes, transfer stock between locations, receive new stock and enter the new cost price, and match new bar-coded products to existing stock items.
Peer-to-Peer Networking	Using our very own IPS Client Software, a true Peer-to-Peer Networking Technology to synchronize POS Data across a Multi-Terminal POS Network.
Poker Machine Interface	Ideal POS System is compatible with most Poker Machine gaming servers. The customer's details are held in the Gaming Server so there is no data entry required at the POS terminal to use the customer's membership card.
Promotion Tables	Promotion Tables is a feature in the software which automatically applies a discount without the operator having to remember to press a discount key at the end of the sale.
Promo Ticket Printing	You can run promotions on specific items; if customers buy a product that is part of a promotion, then a ticket will be printed automatically and dropped into the barrel.
Re-Order Levels	Recommended and Re-Order levels can be set by location and for each stock controlled item. When you are ready to place your next order with your suppliers, you can print a re-order report by supplier to find out what stock needs to be purchased.
RFID Clerk Security	Set permissions by Clerk for specific types of functions including voids, refunds, discount, price over-rides and more. POS transactions are recorded for each Clerk in the Electronic Journal and Activity Log.

Selling Price Schedule	For those items sold at different prices on different days, you can use the Selling Price Schedule feature. Schedules can be enabled for a continuous period (for example, the whole month) or specific days at specific times.
SQL Database	As standard, Ideal POS System runs in Peer-to-Peer mode using locally stored MS SQL Express Database. Larger sites can take advantage of Packet Filtering to prevent data being sent to various terminals.
Stock and Sales Reports	All reports are calculated in real-time providing the most up to date information. You can easily access historical data by entering a from-and-to date range, or selecting from the calendar.
Stock Control	Multi-Location Stock Control with data being sent in 'Real-Time'. You can do a partial stock-take and only count specific items, and/or stock-take one location at a time. Every completed stock-take is archived to allow you to go back and re-print your stock-take variance and valuation reports.
Transfer Mode	Transfer stock between locations easily with Transfer Mode. Select the items as though you were selling them, then finalize the transaction by selecting the location to transfer the stock to.
Waste Mode	You can enter a stock write-off directly from the POS screen and assign it to a write-off category using the Waste Mode feature.

Stock Control

Stock-taking is easy, fast and flexible with *Ideal POS System*. Once the stock has been physically counted, the site can then start trading again even without entering the stock-take into the system or finalizing the stock-take procedure. Once the stock-take has been entered and variance and valuation reports printed, the updated stock levels will then be re-calculated to provide the system with a new opening stock level. You can do a partial stock-take and only count specific items, and/or stock-take one location at a time. Every completed stock-take is archived to allow you to go back and re-print your stock-take variance and valuation reports.

Stock Ordering through *Ideal POS System 5.5* can be done in a number of different ways, from manual entry to PDE Ordering and even fully automated re-ordering by setting recommended and re-order levels. The 'recommended and re-order levels' can be calculated based on previous sales history, so you could look back at the last two weeks of sales and generate a re-order report based on the quantities sold over that period.

Stock Purchasing is simple with *Ideal POS System's* 'batching' method. You can make a start on entering a stock purchase and come back to it later if you get interrupted. Purchase Orders can be printed, faxed or emailed directly to the supplier with *Ideal POS System's* built-in 'Outgoing Email Server'. Invoices from ALM, HLW and ILG can be electronically imported, reducing many hours of tedious data entry. *Ideal POS System* also supports electronic purchase orders for HLW and ILG formats.

Stock Write Offs can be separated into different categories so you know why the stock was written off. You can also enter a stock write-off from any POS terminal using our **Waste Mode function**.

Stock and Sales Reports

Ideal POS System has a wide range of stock and sales reports to choose from. Gone are the days of end of month or end of year reporting. Historical reporting is at your fingertips allowing you to report on any period you have data for. Our most powerful report, the 'Stock Movement Report' will provide real gross profit margins, taking into account stock-take variances, write-offs and discounts. So at the end of the month, you will need only one report to get a complete snapshot of your business and obtain your overall Real Gross Profit Percentage.

Bar Tabs

Have you ever thought of offering **Bar Tabs** to your customers? Bar Tabs will increase customer spending, reduce cash handling and speed up sales over the bar. Bar Tabs work by offering your customers the choice of using a Bar Tab each time they come to the bar to make a purchase. The items are charged to the Bar Tab card, and at any stage the customer can request a Bar Tab bill. When they are ready to pay, the Bar Tab is paid off using their credit card and the sale is finished. Bar Tabs can also be charged to a table. If you have a restaurant within your venue, your customers can start the night with a few drinks at the bar, then sit down at a table and have all the drinks and meals charged in the one transaction. Bar Tabs run on a centralised platform, meaning that your customer can visit any of your bars throughout your venue and accumulate items to their bar tab.

Automatic Happy Hour

Ideal POS System gives you the security and peace of mind knowing that happy hour is automated and controlled by you, not your staff or managers. You can set multiple Happy Hour schedules to provide flexibility in choosing which terminals use Happy Hour and which ones do not.

Poker Machine Interface

Do you currently have Poker Machines with the ability to accept membership cards? *Ideal POS System* is compatible with most Poker Machine gaming servers including Ebet, Independent Gaming, IGT, Turbo, Max Gaming, Dacom, Sentinel, Computagame, System Xpress, and Bounty. While the customer live details and point balances are held in your gaming server database, *Ideal POS System* will automatically **add the customer details to its internal database** when the card is used for the first time. Sales can then be tracked down to individual customers. Ever wonder what to give that special VIP member for their birthday or special occasion? You can see how much members are spending and what products they like to purchase. You can even group members to allow reporting on a collective group of members.

Customer Loyalty

Ideal POS System's built-in customer loyalty is extremely versatile, allowing you to choose which POS terminals offer loyalty. For example, you can reward customers by giving them points per dollar at the bar, but not in the bistro; you can set how many points per dollar you will issue for a sale, and a point redemption value. So if you offered 1 point per dollar, and a redemption value of 10c, this is the equivalent of offering a 10% discount. Points can also be offered on specific items that might be part of a promotion.

Delayed Cash Declarations

Cashing up has never been more secure and accurate thanks to Delayed Cash Declarations. *Ideal POS System 5.5* gives you the ability to allow staff to perform their own "end of shifts", freeing up your management team to focus on what is important in your business. When the staff member performs their own end of shift, they are provided only with a print out of the shift start and end time. Once the staff member has counted the cash, it is only then that the manager can then reveal the variation to the staff member – thus ensuring any over amounts are declared.

Operator Security

Setup your operators in the back office, giving them only access to what you want, and sit back knowing *Ideal POS System 5.5* will be a secure operating environment for everyone concerned. All aspects of the POS system can be locked or unlocked according to the authority you assign to people.

User Security

Username and passwords can be given to each staff member who needs access to back office functionality. Again, all aspects of the back office can be locked or unlocked depending on who is logged in at the time. If you have multiple back offices in different locations, these can be restricted depending on the function that computer or location performs. For example, you have a PC in the cellar, and the cellar only enters invoices into the system. All other aspects of the back office can be locked. With usernames comes the ability to track what each individual is doing through the "user access log".

Customer Advertising Screens

2 Line customer displays still have their place in certain circumstances, but imagine being able to display interactive advertising while the customer is being served. The customer's attention is already on the screen because they are watching the items being added to their bill, but on the same screen they are also watching advertisements for events and specials within your venue. You can even sell advertising space to local business or give sporting groups and local charities advertising space for their events. There is no limit to the number of advertisements you can have running simultaneously.
